- The COVID-19 crisis effect - In the year 2020, it appears that due to its flexibility and global spread the Group successfully handled the crisis. Paytonôs worldwide manufacturing facilities and geographically spread of the Group's production sites in China, the Philippines, Israel, England and the United States has proven itself effective and minimized the impact of the coronavirus pandemic on its business operations enabling to deliver most of its orders for year 2020 on time.

  Today, all production sites are fully operational in a ñCorona routineò while strictly maintaining all rules. Assuming that no dramatic changes will occur, management estimates that the worldwide Covid-19 epidemic will have no major impact on the Groupôs activities and it will continue to conduct its business in a controlled manner of ñCorona routineò during year 2021.

- It is further clarified that because the COVID-19 crisis is an ongoing global event, other effects may occur, such as: changes in customers demands, global prices increase, shortage in raw materials, lack of manpower and increase in labor costs.

- Backlog - As at December 31, 2020 backlog amounted to USD 18,921 thousand (December 31, 2019 - USD 13,505 thousand).
